Technician Notes

Dug with mini excavator in walkway were technician said they located the tank. We found the tank 3 feet down and located the inlet cover, center cover, and the outlet cover so the driver inspecting the tank would have access. Tamar spoke with customer to see if they wanted to install a riser. Customer okayed the installation of the riser. Installed riser, it is just below grade so the stone pathway could be reinstalled over the top of it. Tank is concrete baffles are in good condition. 1000-gallon concrete tank appears

to in good condition. Sludge 6", Cake 8", After the riser was installed i went back and backfilled around the riser. We removed all large rocks with a wheelbarrow and placed them in the woods. We replaced stone walkway and raked off the affected area. Threw down seed, mulch, and fertilizer. Tank was pumped by Tim.
